Web Developer Vacancy
Test task

This task tests multiple skills:
- *PSD to HTML/CSS*
- *Javascript*
- *PHP OOP + MySQL*

Big picture
You will need to create a fully functional login/registration page from PSD.

Part 1: PSD to HTML/CSS
PSD & Style Guide download link:
https://drive.google.com/drive/folders/1EintWHh9yf6JzhZDAhrkZjnsfL47NYOC

Make sure the site is responsive. There is no design for smaller (mobile/tablet) versions but just stack it and make sure there are no bugs. We won't judge the design of the mobile version, only the usability/bugs.

Part 2: Javascript
Animation: https://vimeo.com/153219852
You need to animate the active field with a white background. You can use jQuery (but keep it to a minimum).

Part 3: PHP OOP + MySQL
Create functionality for:
- Log in (with email and password)
- Register (must save Full name, e-mail, password)
- Attributes*

*Attributes task is to have a way to add custom attributes to users. For example, we now want to add age to user profiles. Then we want to add something else. The info must be stored in a separate table than users and it must be possible to add unlimited attributes.

This task is so we can check your PHP OOP and MySQL skills so make sure you use objects and classes, and everything is written in plain PHP without any framework.

Submission
Once you have finished this task please send us the code and MySQL dump via email.

NB: Before you submit this task make sure the code is documented (with phpDoc) and without any junk code (code that is commented out, console.log(), var_dump(), etc).
